

Animation Curves

TY on the graph editor

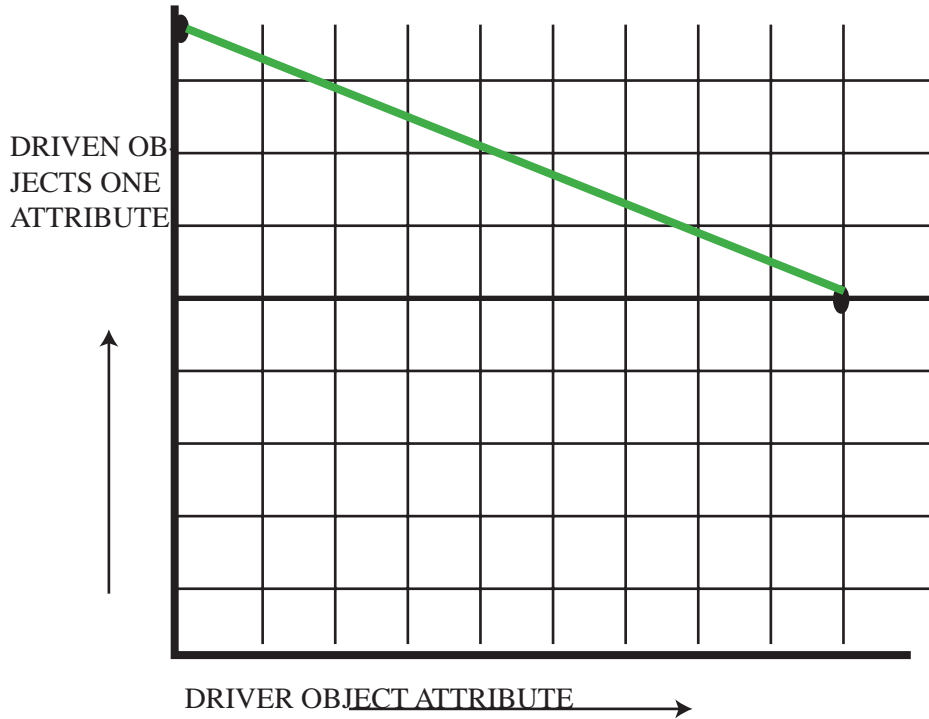

Time driven values is made by setting keyframes. Rule: Move the time first and then objects value and set a key frame.

Animation Curves

Set Driven keys (also know as Reactive Animation)

SDK

In set driven keys one attribute drives a attribute of another object. This is independent of time and the driven keys show up and can be edited in the Graph Editor. Be sure to select the driven object to edit in the Graph Editor.
